## ABIAL sound bites

Digital transformation  
of Internal Audit  
3 June 2021  
12:30 - 13:30

“

Internal Audit Digital Transformation helps companies transform their Internal Audit function to better provide improved strategic value to the board and key executive stakeholders, expanded risk coverage and cost efficiencies to the business.

By blurring the lines between people and technology, Internal Audit (IA) functions can optimize their operating model and create a dynamic audit approach that allows a quicker response to risk and deeper insights into the risks that might matter the most to leadership. Organizations must rely on trust to be successful, and Internal Audit can help build that brand of trust by helping management respond to risks faster and with better information. Digital Transformation is key to improving how Internal Audit provides assurance on the downside risks that are preventable, insight into the

upside risks that management should be exploring, and foresight into the outside risks that are on the horizon.

## AGENDA

- ▶ Classic IA vs Digital IA
- ▶ Internal Audit enabled by digital technologies
- ▶ Typical IA transformation journey
- ▶ Current constraints for shifting to digital IA
- ▶ Perspectives on digital IA
